- **Abundance categories (Cat.):** C = common, R = rare, V = very rare, P = present - to fill if data are deficient (DD) or in addition to population size information
- **Data quality:** G = 'Good' (e.g. based on surveys); M = 'Moderate' (e.g. based on partial data with some extrapolation); P = 'Poor' (e.g. rough estimation); VP = 'Very poor' (use this category only, if not even a rough estimation of the population size can be made, in this case the fields for population size can remain empty, but the field "Abundance categories" has to be filled in)

4. SITE DESCRIPTION

4.1 General site character

[Back to top](#)

Habitat class	% Cover
N23	100.0
Total Habitat Cover	100

Other Site Characteristics

In questa zona, i macchioni di Posidonia oceanica si presentano rigogliosi con elevata moderata fogliare ed altezza media variabile intorno ai 70-80 cm. La presenza di residui di prateria nel tratto prospiciente le Isole Cheradi Ã probabilmente dovuto alla presenza di postazioni militari che precludono qualsiasi attivitÃ nell'area di mare. Verso Torre Canneto la maggiore rigogliositÃ e buona salute del posidonieto Ã probabilmente dovuta ad una diminuzione della pressione antropica sulla fascia costiera.

4.2 Quality and importance

Lungo il limite inferiore della prateria Ã presente una biocenosi Coralligena ricca e diversificata dal punto di vista biologico. Il coralligeno presenta, infatti, una notevole variÃtÃ di specie vegetali come alghe incrostanti Rodoficee (Peyssonnelia, Melobesia) e Cloroficee (Codium bursa, Halimeda tuna) ed animali come Poriferi (Agelas oroides, Axinella sp.), Briozoi (Schizobrachiella sanguinea), Anellidi (Protula sp., Hydroides sp.), Echinodermi (Echinaster sepositus) ed infine Tunicati (Halocynthia papillosa, Didemnum spp.).
