- **Abundance categories (Cat.):** C = common, R = rare, V = very rare, P = present - to fill if data are deficient (DD) or in addition to population size information
- **Data quality:** G = 'Good' (e.g. based on surveys); M = 'Moderate' (e.g. based on partial data with some extrapolation); P = 'Poor' (e.g. rough estimation); VP = 'Very poor' (use this category only, if not even a rough estimation of the population size can be made, in this case the fields for population size can remain empty, but the field "Abundance categories" has to be filled in)

Other Site Characteristics

Lo Scoglio dell'Eremita o Isolotto di San Paolo si trova a circa 50 metri dalla costa, alla periferia sud del paese di Polignano a Mare. Il sito rappresenta ad oggi l'unica colonia accertata di Gabbiano corso (*Larus audouinii*) lungo la costa adriatica italiana. Il gabbiano corso è l'unico Laride endemico del bacino del Mediterraneo. In Italia nidifica circa il 4-5 % della popolazione mondiale della specie, tra il comprensorio sardo-corso, l'Arcipelago Toscano, la Campania e la Puglia (Serra et al., 2001). Il gabbiano corso presenta uno status generale di conservazione sfavorevole ed è una specie ad elevato interesse conservazionistico. Il sito individuato risulta potenzialmente adatto ad ospitare una importante colonia della specie, come accertato nel corso di alcuni monitoraggi effettuati, la presenza di oltre 45 individui (adulti ed immaturi), attirati dalla presenza delle coppie nidificanti. Nel sito è anche accertata la presenza di almeno 3 coppie di Gabbiano reale mediterraneo (*Larus michaellis*).

4.2 Quality and importance

Il sito rappresenta ad oggi l'unica colonia accertata di Gabbiano corso (*Larus audouinii*) lungo la costa adriatica italiana.
