Other Site Characteristics

L'area, posizionata nelle Murge nord-occidentali, Ã caratterizzata da residui boschi mesofili e piccoli corsi d'acqua, circondati da seminativi. In detta area, sono state rinvenute specie la cui protezione Ã considerata prioritaria dalla ComunitÃ Europea ai sensi delle Direttiva habitat 92/43, tra cui l'unica popolazione di

Salamandrina terdigitata nota per la Puglia. La specie "stata riscontrata in un torrente perenne all'interno di una stretta valle caratterizzata da una perticaia di Cerro (Quercus cerris) posta a circa 400 m .s.l.m. assimilabile all'habitat delle "Foreste pannonicobalcaniche di quercia cerro-quercia sessile" cod. 91M0. Il ritrovamento di questa specie e di contingenti numerosi di Rana italica, conferisce a questo sito un'elevata rilevanza erpetologica, anche in considerazione che, per le specie citate, rappresenta il limite dell'areale conosciuto. Il sito presenta inoltre popolazioni di altre specie di interesse conservazionistico (vedi Tabella) e ospita anche specie ornitiche, assai rare o addirittura assenti dal restante territorio regionale (ad eccezione del Gargano e del Subappennino Dauno) quali: il Picchio rosso maggiore (Dendrocopos major), l'Allocco (Strix aluco), il Picchio muratore (Sitta europaea), il Pecchiaiolo (Pernis apivorus) ecc. Tra i mammiferi, spicca la presenza del Toporagno acquatico di Miller (Neomys anomalus), ma sono state osservate anche tracce di Istrice (Hystrix cristata), Tasso (Meles meles), Faina (Martes foina), e soprattutto del Lupo (Canis lupus). I Valloni rappresentano dei veri e propri corridoi ecologici tra la Puglia e la confinante Basilicata. L'area, inoltre, appare di rilevante valore per il parco Regionale "Valle dell'Ofanto" essendo ubicata alle sorgenti del torrente Locone il cui corso "è inserito in parte nell'area parco.

4.2 Quality and importance

I Valloni rappresentano dei veri e propri corridoi ecologici tra la Puglia e la confinante Basilicata. L'area, inoltre, appare di rilevante valore per il parco Regionale "Valle dell'Ofanto" essendo ubicata alle sorgenti del torrente Locone il cui corso "è inserito in parte nell'area parco. Rischio di messa a coltura dei lembi di bosco ancora presenti nelle aree pianeggianti dei valloni, e problemi legati alle infiltrazioni di fertilizzanti e pesticidi usati in agricoltura all'interno dei corsi d'acqua presenti nei valloni.
